

AGGREGATE

Specific Gravity Frame

Specific gravity frame is used to find the volume occupied by the aggregate in various mixtures containing coarse aggregates, with the aid of a scale and a wire basket. It is also used to find the volume of irregularly shaped natural stone and similar materials.

The lower part of the frame incorporates a moving platform, which carries the water tank allowing the test specimens to be weighed in both air and water.

The frame can be used with any type of electronic balance fitted with under-bench weighing facility.
