

SOIL

Automatic Soil Compactor

Automatic Soil Compactor are designed to compact specimens automatically and uniformly, assuring conformity with the above listed international standards. The principle of the design is to allow the hammer to drop the required height into the soil in the mould which rotates circularly to distribute the blows uniformly over the surface of the specimen in the mould. The drop height is adjustable to 300 mm, 12" (305 mm), 450 mm and 18" (457 mm). according to different standards. The rammer is circular faced and interchangeable to 50 mm or 2" (50.8 mm).diameter. Rammer weight is adjustable according to reference standard. When compacting 100 mm or 4" diameter specimens the unit operates on a single radius and when compacting 150 mm or 6" diameter specimens the unit operates on inner and outer radius to obtain even compaction.
